evenordinstorm.com

From the moment I built my first application, I knew software development was the perfect blend of design and logic that would become my passion.

Full-stack developer with expertise in building responsive web and mobile applications using React, React Native, Vue.js, and Angular, supported by .NET Core and Node.js back ends within the express framework. I apply modular architecture and best practices, from component-based UI development and RESTful API design to CI/CD pipelines and automated testing, to ensure code remains maintainable, flexible, and extensible.

As UX & Frontend Lead, I led the redesign of company-wide operating procedures through bespoke software that streamlined staff workflows and enhanced client journeys, delivering accessible (WCAG 2.1-compliant), functional, and high-performance user experiences.

Software Development Projects evenordinstorm.com
